Part I System of Organisational Entities

1	Considerations on Systems Theory	3
1.1	Views on the Concept of a System	3
1.2	Techniques and Methods Used in Systems Theory	7
1.3	Use of Automatic Adjustment Systems in Management	10
1.4	Information in Systems Management	16
1.5	The Risk in Systems Management	18
1.6	The Attitude of Managers on Risk Taking in Organisational Entities	20
	References	24
2	Addressing the Organisational Entities by Using the Systems Theory	25
2.1	Theoretical Aspects on Organisational Entities	25
2.2	Organisational Entities: A Cybernetic System	32
2.3	System of Organisational Entities Functions	33
2.4	Economy of Organisational Entities: A Micro-economic Cybernetic System	35
2.5	The Complex Cycle of Organisational Entities Operation	40
2.6	The Control Process in Organisational Entities	44
	References	48
3	Organisational Entities Under the Conditions of Market Economy Globalisation	49
3.1	Market Economy Globalisation	49
3.2	The Production System: Component of the “Organisational Entities” System	53
3.3	Some Theories on the Structure of Current Organisational Entities	54

3.4	The Ambiguous Environment for the Development of Organisational Entities and Its Influence on Managerial Decisions	58
3.5	Development of Organisational Entities "in Waves"	62
	References	66

Part II Some Problems on the Econometric Theory

4	Econometrics and Scientific Management	69
4.1	Econometrics and Its Contradictions	69
4.2	Considerations on the Object-Signal-Model Relation in Econometric Research	73
4.3	Expressing the Economic Relations by Econometric Functions and Equations	75
4.4	Connections of Econometrics to Management Science	83
	References	95
5	Simulation and Modelling: Econometric Technique	97
5.1	The Model and Modelling in Econometrics	97
5.2	Using the Matrix Calculus to Study the Models	102
5.3	The Input-Output Model and Its Characteristics	104
5.4	Optimisation Models	106
5.5	Production Models	108
5.6	Simulation in Econometrics	114
5.7	Industrial Production Simulation Model	116
5.8	Expert Systems Used in Industrial Production Models	126
	References	136
6	Use of Production Functions in Econometrics	137
6.1	Creation and Motivation of Production Functions	137
6.2	The Trend in Production Functions	141
6.3	Techniques to Calculate Production Functions. Difficulties and Methods to Overcome Them	145
6.4	Econometric Form of the Leontief Model	148
6.5	Cobb-Douglas Functions, Leontief Function and Their Economic Interpretation	151
	References	158

Part III Econometric Models Used in Management

7	Models Based on Linear Programming	161
7.1	Theoretical Foundation of Linear Programming	161
7.2	Using the Simplex Algorithm in Linear Programming	170
7.3	The Convergence of the Simplex Algorithm	177
7.4	The Basic Program in the Simplex Algorithm	179

7.5	The Dual Simplex Algorithm	182
7.6	Re-optimisation and Parameterisation in Linear Programming . . .	186
	References	206
8	Models Focused on Dynamic Programming	209
8.1	Time in Econometric Models Using Dynamic Programming . . .	209
8.2	Discrete Dynamic Programs	211
8.3	Stationary Dynamic Programs	218
8.4	Interpretation of Dynamic Programs Using Graphs	220
	References	224
9	Models Using the Graph Theory	225
9.1	Elements of Graph Theory	225
9.2	The Concept of Non-oriented Graph	231
9.3	Calculating the Size of the Critical Path in a Graph	232
9.4	Graphical Transport Networks	236
9.5	Hamiltonian Paths and Circuits in a Graph	240
	References	245
10	Models that Use the Queuing String Theory	247
10.1	Fundamentals of the Queuing String Theory	247
10.2	Model with One Service Station and Unlimited Queuing String . .	249
10.3	Model with One Service Station and Limited Queuing String . . .	258
10.4	Model with One Service Station and Arrivals Resulting from a Finite Population	261
10.5	Model with Several Service Stations and Arrivals Resulting from an Infinite Population	266
10.6	Model with Several Service Stations and Arrivals Resulting from a Finite Population	271
	References	279
11	Models Based on the Theory of Games	281
11.1	General considerations on the theory of games	281
11.2	Decisional Process: Conceptual Approaches	284
11.3	Models to Optimise the Multiple Criteria Managerial Decisions . .	293
11.4	Models Used to Optimise the Decisions Adopted in Strategic Management	308
	References	328
12	Models Used in Stock Management	329
12.1	Stock Management: Theoretical Approaches	329
12.2	The Inversion of a System of Stochastic Equations	333
12.3	Models Used in the Management of Stocks	335
12.4	Heuristic Models Used in the Management of Stocks	352
	References	353

13	Models Used in the Management of Replacing Fixed Assets	355
13.1	Theoretical Considerations	355
13.2	Econometric Methods Used in Analysing Technological Innovations	360
13.3	Econometric Patterns Used for Adopting the Decision of Replacing the Equipments and Machine-Tools	371
	References	375
14	Econometric Models Used in the Management of Production Costs	377
14.1	Using the Matrix Calculus to Determine the Structure of Primary Production Expenses by Product	377
14.2	Addressing the Organisational Entities by Using the Systems Theory	386
14.3	Developing an Econometric Model of the Production Cost	390
	References	433
15	Using Budgets Modeling Unit Cost of Production	435
15.1	Budget Cost of Production: Theoretical Approaches	435
15.2	Budget Structure Model of Unit Cost of Production	437
	References	479
16	Models Used in Production Quality Management	481
16.1	The Concept of Quality Management	481
16.2	Model of Production Quality Based on the Taguchi Technique	488
16.3	Model Used to Measure the Quality and of Poor Quality Products in View of Their Life Cycle	513
	References	523
